

Scenario #1: Sign Up

Description

This test scenario covers a user signing up (or attempting to) with both valid and invalid data with the aim of:

- Creating a valid user
- Testing invalid input data and checking input validation

Test Scripts

The following scripts will cover this scenario:

- 1.1. Valid Signup
- 1.2. Duplicate Username
- 1.3. Duplicate Email
- 1.4. Invalid Username
- 1.5. Invalid Email
- 1.6. Invalid Password
- 1.7. Invalid username and email

Use Case

1.7. Register

When User

Wants to register an account for the service they click register, and fill out the requested information

So that the User is granted an account and the system has the required information about them

Extends use-case 1.6. (Login)

Test Components/Requirements

This test scenario covers the following high-level test requirements (see scripts below for specific requirements covered by each test script):

- Authentication
- Persistence

User Groups

- Average user

Script 1: Valid Signup

Description

- An unauthenticated user will visit a page of the site where the navigation bar is offered (currently all pages)
- Attempt to sign up with valid data
- Observe the result - The user should then be created and signed in automatically

Setup

- The testing user should ensure they are logged out
- The testing user should ensure the information they're entering to test with is unused and a user already persisted in the system doesn't exist with the same username or email address

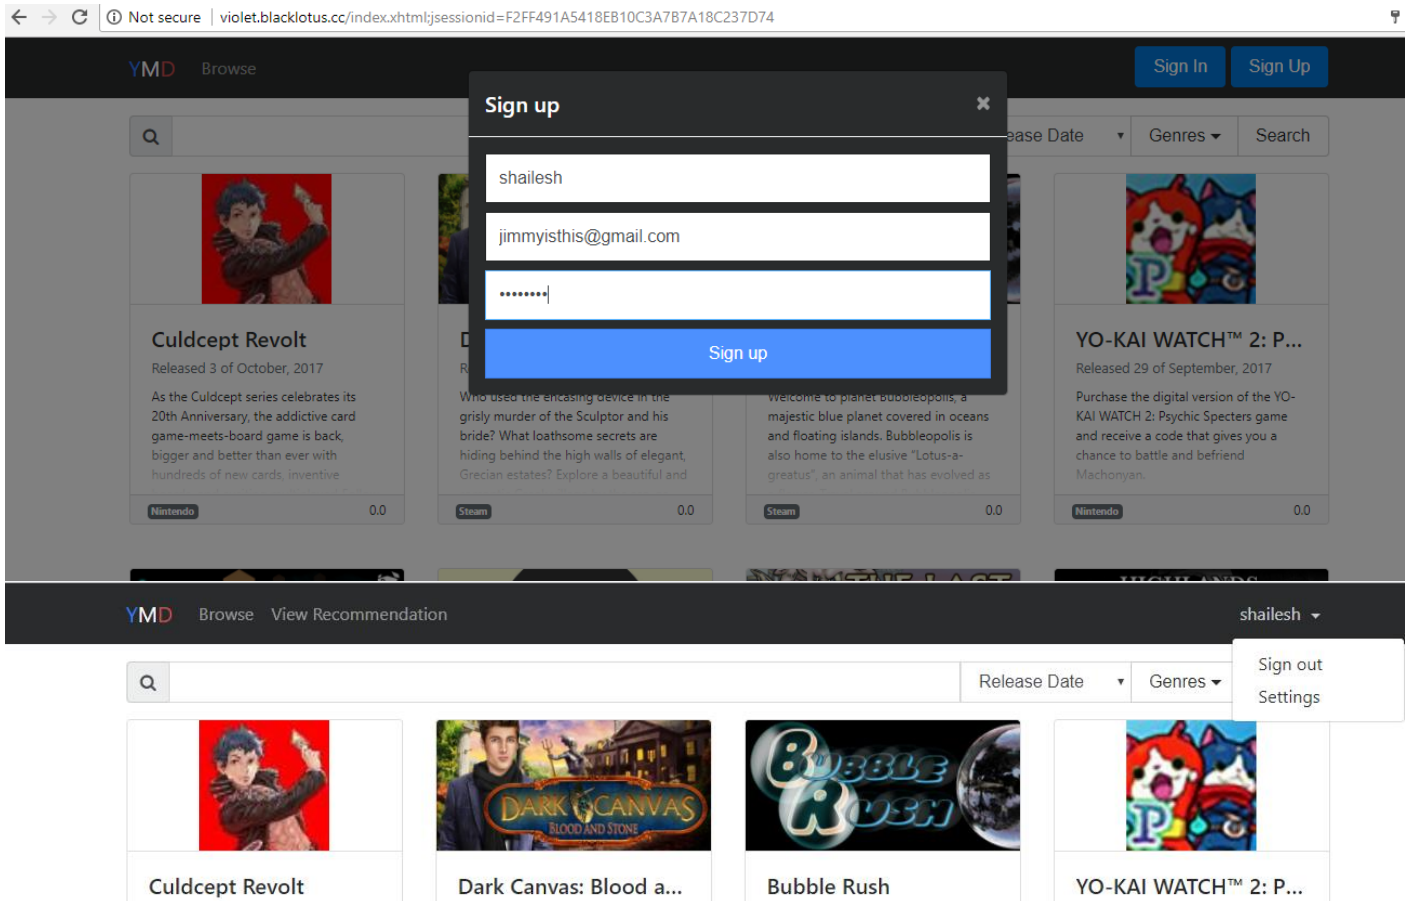

Step #	Test Step	Expected Test Results	P	F
1.	Visit the site	Site loads with no errors		
2.	Click "Sign Up" in the top right	A modal window appears asking for registration details		
3.	Fill in a valid set of details (template details found below, replace X with a number)	No validation errors displayed		
4.	Click "Sign Up" in the modal window	The page refreshes and the username entered can be found in the top right as you are signed in		

Field Name	Data
Username	shailesh
Email	jimmyisthis@gmail.com
Password	Password

Date/Time	Tester	Test Phase	Status
04/10/2017 08:25	Shailesh Jha	Alpha	Passed

Test Scenario #1: Sign Up

Script 2: Duplicate Username

Description

- An unauthenticated user will visit a page of the site where the navigation bar is offered (currently all pages)
- Attempt to sign up with an existing username and otherwise valid data
- Observe the result - The user should not be created and a validation error should be displayed

Setup

- The testing user should ensure they are logged out
- The testing user should ensure a user with the details in *italics* already exists and is registered

Step #	Test Step	Expected Test Results	P	F
1.	Visit the site	Site loads with no errors		
2.	Click “Sign Up” in the top right	A modal window appears asking for registration details		
3.	Fill in details from the data table			
4.	Click “Sign Up” in the modal window	A validation error is displayed and the user is not created		

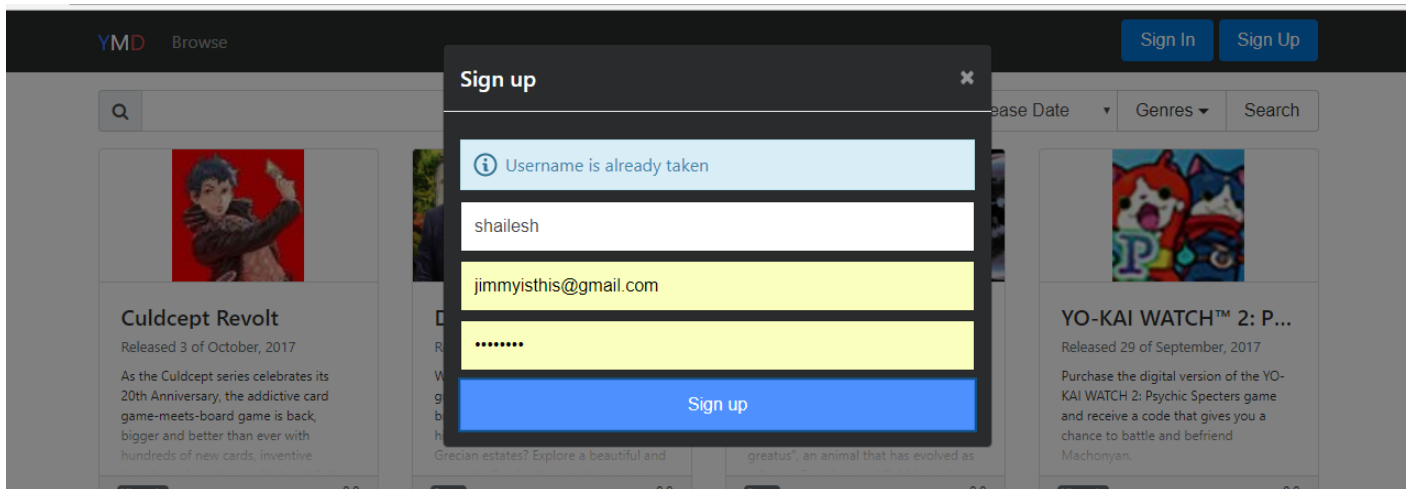

Field Name	Data
Username	shailesh
